THE ROCKEFELLER UNIVERSITY PRESS
PROUDLY ANNOUNCES A NEW BOOK BY

RENÉ J. DUBOS

THE PROFESSOR, THE INSTITUTE, AND DNA

This is the story of the personal life and scientific achievements of Oswald T. Avery—an extraordinary man virtually unknown outside the scientific community. Yet he and his colleagues discovered that DNA carries hereditary information, and so revolutionized genetic research.

These profoundly important pages of medical history include a warm description of Avery's life-style and work-style at The Rockefeller Institute for Medical Research, written by a scientist-writer of deep sensitivity and perception, who shared Avery's interests and was a member of his laboratory.

Dr. Dubos, himself an eminent bacteriologist, here also unfolds the development of medical research in the United States and the philosophical concepts that lie behind today's understanding of the immunology of bacterial infections.
